Vary the title font size between 60–80 pt to make sure it fits nicely

by **FIRST NAME SURNAME**

This is the introduction in Roboto Condensed Bold, 22 pt. Please keep in mind: After the title, introduction and conclusion are the most important sections of your poster: Based on this, your readers will decide if they will dive into the details of your work [1].

Overall, make sure to present your thesis in a simple, concise and visually attractive way. Use pictures, maps and colors; avoid complex tables of data. Make sure your content is understandable without additional oral explanation.

Read on for some guidelines on how to use this template [2, 3].

HEADLINES

Headlines (h2) are defined in Roboto Condensed Bold, 28 pt, using Small Caps and 8 mm spacing before and 5 mm after. In the paragraph styles you also find a definition for h3 headings, but it's advisable to keep the structure on a poster simple.

PARAGRAPHS

The regular text should be Roboto Condensed Light in 22 pt (using default line height) with 6 mm padding after each paragraph. If that doesn't fit your text requirements, you can vary the font size between 20 and 24 pt. Use the paragraph styles for easy adjustment.

Use short but informative captions. Keep 6 mm padding between figure and caption. Use 3 pt colored strokes if you see fit.

The number and placement of figures is up to you, but the width should be one or multiple full columns. If you have more than one figure, number them (e.g., Fig. 1, Fig. 2).

FONTS

The font used on this poster is Roboto Condensed in its variations Light, Light Italic, Regular and Bold. The font by Christian Robertson is freely available, e.g. via fontsquirrel.com/fonts/roboto.

COLORS

In the swatches you'll find color definitions used in the Cartography M.Sc. logo. Feel free to use them as a color scheme in your diagrams and figures.

On the website we are using the colors to differentiate the four universities:

- blue [TUM]
- green [TUW]
- yellow [TUD]
- red [UT]

If you want you can color-code your poster according to the university you wrote your thesis at.

LISTS

Ordered lists

1. Roboto Condensed Light, 22pt
2. numbers in bold
3. 8 mm text indent
4. 2 mm spacing after

Unordered lists

- bold dash instead of bullet points
- otherwise similar to ordered list

MARGINS AND COLUMNS

The A1 poster uses 30 mm margins and 4 columns with 12 mm spacing, which results in a column width of 124.5 mm. The spacing between the gray header area and the text is 18 mm; the spacing between text and footer area is 22 mm. If using the template in InDesign, you can use the existing settings and guides.

IMAGE FORMATS

For maps and diagrams, try using vector formats (such as pdf, ai, eps). If you need raster formats (e.g. for photos), make sure you have them available in good enough resolution (preferably 300 dpi).

PRINT AND EXPORT

When you are finished with your poster, export your file as pdf. If you print your poster at a copy shop, PDF/X-4 is a good format to use. There is a preset of 3 mm bleed in the file, which you can add to your PDF settings if needed.

CONCLUSION

Congratulations, you read all the way through the template instructions – or you are like most people and skipped from the title to the conclusions ;-) In any case: Please take some extra effort to make sure your last paragraph summarizes the outcome of your work in a clear and understandable way.
